

Automated Forex Trading System

The Forex MegaDroid is an automated Forex trading robot This was specifically designed to function in all market environments. Which is exactly why its performance during testing was close to the highest we have ever witnessed. The facts are clear and un-debatable on this issue, the market can make unexpected moves at the drop of a hat and having a weapon in your arsenal able to react instantly to those corrections and profit from them at the same time, puts you in a very powerful position. Because of this we were forced to give it our highest rating possible, a 10 out of 10. This item is not to be underestimated and MUST be in your final decision making process when making your purchasing decision.

This Forex robot uses a cool new technology known as Correlated Time and Price Analysis (RCTPA). What this does is helps the robot make trades in the present by quickly calculating years of similar looking market conditions in the past. The Forex market like any other will follow specific patterns and Mega Droid will use years of back testing to profit from those patterns.

Now the hallmark of Forex Mega Droid and why it is creating such hype is the fact that the program is the first Forex robot to have artificial intelligence (AI). What this means is instead of simply taking the same trades over and over, if one trade is a loser the robot will learn from the experience. It will then factor in why that trade was a loser and use that valuable information for later trades. This Automated Forex Robot is incredibly valuable because the problem with most Forex robots is they stop working after a certain amount of time. Forex MegaDroid learns from its mistakes and is constantly adapting to market conditions. Forex MegaDroid Results For a complete review and listed benefits visit <http://www.sneakymoneysystem.com> This Forex MegaDroid review would not be complete without posting some initial results from our testing of the product. Now keep in mind this product is still very new, so these numbers COULD change in the future. The initial results have been pretty staggering. Forex MegaDroid has shown a 95-96% win percentage on trades and tripled one of our accounts. The best part is the robot was very good at limiting losses by not riding costly drawdowns. A high win percentage with minimal losses are the signs of an EXCELLENT automated software. Before jumping in I recommend learning a little more about the program. But there is an awful lot to be excited about with this one. For a complete review and listed benefits visit <http://www.sneakymoneysystem.com>
